K-Tronic - NEW: with Low - Energy - Management

The new generation of K-Tronic basket transport machine from MEIKO insures efficiency on one hand for the employer and a lighter work load for the employee on the other. Every model of this range shows a clear step into the future, with advantages that have been developed through systematic rationalisation.

Not only can MEIKO customers expect to use the appliance satisfactorily even in 15 years time, but they should also be able to utilise fully the numerous advantages that are incorporated within the basket system.

In all cases of

- a continuous operation within fluctuating load factors
- a varied type and size of dish and small items
- limited working space

the basket transport machine is the ideal solution.

The reason for this lies in a series of achievements that are both constructural and conceptual. MEIKO basket transport machines make exceptionally good use of floor space, and the intelligent design and construction methods leads to:

- First class wash performance
- Outstanding efficiency
- Ensured hygiene
- Maximum economy
- Improved working conditions
- Environmental control

In conclusion, these advantages bring technical, economical, and ecological confidence now and in the future-striking advantages of the MEIKO quality profile.
